

What Your Pets Would Say If They Could Talk

Household pets die younger now than ever before. Statistics show that the normal lifespan for the average pet dog or cat in the United States has decreased over 20 percent in the last 50 years. The problem is that our pets are becoming nutritionally deficient due to the fact most commercial pet foods lack sufficient minerals, enzymes and proper nutrients.

In addition, many commercial-grade pet foods contain harmful additives, fillers, binders, chemicals and processed grains instead of high-quality proteins and other essential nutrients. They offer little to no health benefits. Sadly, many of these foods can actually weaken our pets' immune system leaving them vulnerable and open to a number of undesirable health conditions.

Veterinarians report that many of today's pets suffer from allergies, skin problems, hypertension, heart disease, cancer, liver and kidney failure to name a few. These conditions have been exacerbated by the foods we feed our pets and the lack of proper nutrients.

Supplements for animals allow pet owners to do the best for their "companions". In addition to providing unending love, food and safe shelter, there is much more we can do for our pets to keep them happy and healthy. Nutritional supplements for our pets can rejuvenate their health, increase their lifespan and promote vitality.

If we believe that our pets are receiving sufficient supplements in their pet food by stating "extra nutrition" (even the most advanced pet food can't give our pets all the nutrition they need) or "advanced nutrients" (many nutritional supplements lose their effectiveness in pet food form) we have been misled.

To ensure optimal health for our pets, we should seek out nutritional supplements that contain the following:

- * **Polysaccharides and polypeptides**, which are key ingredients that helps cells in all animals metabolize fats better for quicker energy and increase lifespan. Studies reveal that polysaccharides and polypeptides have been shown to preserve nerve cell function by supplying food and nutrients at the cellular level. They provide the cell with food easily recognized and utilized by the cell to generate energy. Polysaccharides and polypeptides not only build up the immune system to protect against infection, illness and diseases of all kinds, but also help maintain a shiny, healthy coat.
- * **Digestive enzymes** help restore proper digestion and dietary balance. Digestive problems result in the improper absorption of nutrients. Malnutrition can actually occur as a result of chronic digestion problems and is more common in our house pets than one might think. Symptoms of malnutrition are low energy levels, unhealthy skin and coat, and greater susceptibility to illness. Additionally, poor digestion contributes to an over growth of unhealthy bacteria in the intestines which can cause many illnesses.
- * **Crystalloid electrolyte minerals** are another essential ingredient. Minerals and trace elements must be present for all the body processes to work. Studies have shown that the immune systems of animals respond favorably to mineral treatment, with many sick pets receiving a speedy recovery. Crystalloid electrolyte minerals are the best form of minerals as they are totally absorbed in the body.

Our pets, just like people, can suffer from a diet of over-processed foods, excessive use of antibiotics, and stress. There is increasing evidence that a dietary supplement will help balance out these detrimental influences and restore a natural state of health. This all-natural view of pet health will lessen the need for trips to the vet and allow our pets to live a long healthy life.

CPN™ is a combination of polysaccharides/polypeptides, digestive enzymes and crystalloid electrolyte minerals, synergistically blended to promote a healthier, stronger pet. CPN™ is designed to provide nutrients supporting repair, free-radical defense, immune strengthening, detoxification, tissue oxygenation, and healing processes in our pet's body. I personally use CPN™ on my dog (Tashi) and my cat (Willow) food daily. I highly recommend this product to be used by all animal lovers.
